

ColorRite

OEM APPROVED MOTORCYCLE PAINT

Touch-up Pens

Color, Clear, Primer

ColorRite's 1/2 oz touch-up pens are perfect for the minor cosmetic repair of motorcycle paint. Each is equipped with an easily handled chiseled tip, so your steady hand can cut the sharp line required for detailed paint repair. If it's a key-nick or button-scratch, or your significant other wasn't careful and now there's a zipper tattoo, the ColorRite Touch-up Pen is what you need.

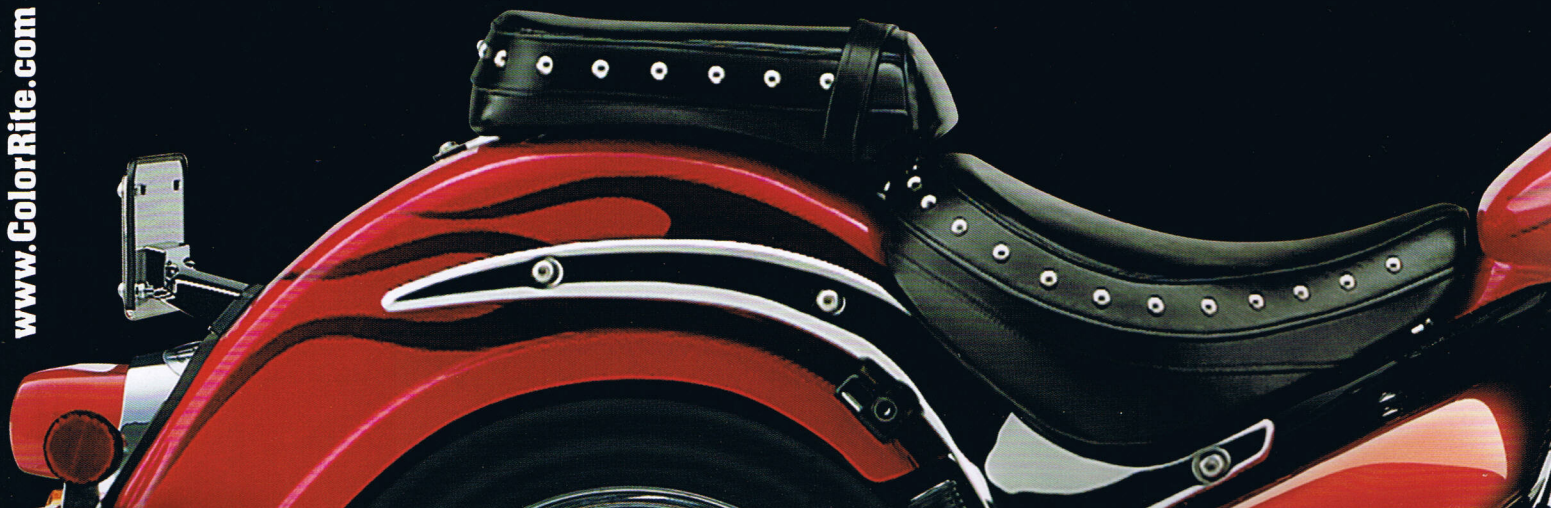

Touch-up Bottles

Color, Clear, Primer

Do you need some more touch-up paint, or do you just prefer using a brush? With more volume than the pen (two ounces in the bottle), ColorRite's Touch-up Bottle can be used for bigger fixes. The brush is built into the cap, as you'd expect.

Aerosol Cans

Color, Clear, Primer

Take the painting process in hand with ColorRite aerosols. Primer, color and clearcoat are convenient and simple to apply – all three steps of the process are available in 11oz spray cans. They're equipped with high-end nozzles, so you can shoot whatever paint you need with nearly the same effect as professional painting equipment. ColorRite's aerosols put bodyshop-quality paint within reach of every motorcycle owner.

Spray Kits

Gloss Clear, Eggshell Clear

These are the most durable aerosol clearcoats on the market. ColorRite's KK7 and KK8 clears are catalyzed – two chemicals, that when combined, react molecularly to form a supremely durable coating, resistant to gasoline, solvents, atmospherics, bird droppings and other nasty substances.

Compatibility Warning
Important – Remember to use ColorRite paints only in conjunction with other ColorRite products. Cross-brand compatibility is not tested by ColorRite and improper chemical reactions can occur when using one manufacturer's paint with another's clearcoat, and vice-versa. Staying brand-specific is important to guaranteeing the quality of your final product.

Professional Products

Color, Clear, Primer

Professional bodymen and bike painters have particular needs from the paints they choose to use: superior product, convenient quantities, easy mixability and quick delivery. ColorRite can deliver these in spades – they've made a good living taking care of shops just like yours.

Colorcoats

The color is the core of your paintjob. ColorRite manufactures only the highest quality urethane colors, so you can spray that bike, quad, or ski with confidence in the end result. When applied right, you'll net OEM-grade strength, adhesion, gloss and depth, and you will be asking for ColorRite paints again and again.

Clearcoats

ColorRite's urethane clears are formulated to offer the ultimate protection for your ColorRite color. They meet and exceed all manufacturers' standards for hardness and UV-resistance, and will deliver a long-lasting outer shell that can be polished and buffed for years of good service. Available in gloss and eggshell/matte.

Compatibility Warning

Important – Remember to use ColorRite paints only in conjunction with other ColorRite products. Cross-brand compatibility is not tested by ColorRite and improper chemical reactions can occur when using one manufacturer's paint with another's clearcoat, and vice-versa. Staying brand-specific is important to guaranteeing the quality of your final product.

Reducers

Reducer is to color as gas is to your bike – without reducer, color won't go. ColorRite's spec urethane reducers are formulated to elicit the best performance from the colors you apply, with ideal application and perfect curing. The dreaded results of bad paint can be avoided if you start with the best combination of products, and this reducer is the cornerstone of the best paint. It's available in the sizes you'll require for use with any and all ColorRite colors.

Wax & Grease Remover

You wouldn't paint on a dirty canvas – don't start your next spray job until you've guaranteed a perfectly clean to-be-painted surface. ColorRite manufactures the industry-standard cleaner in aerosol and bottle form (for your application pleasure), and it'll ensure the bodywork you've chosen to shoot is really ready for the ultimate in color.

Primers

Primer is everyone's foundation when looking for the ultimate paintjob. If you want all the colors and clears to work properly, the primer must be right beforehand. Paint usually won't stick to raw surfaces – you'll need primer's capacity for mechanical and chemical union with uncoated materials to give the color a chance.

Plastic Repair Kit

The Ultimate Fix For Plastic

No more rivet & sheetmetal patches – ColorRite's plastic repair kit solves the trouble of cracked panels and missing chunks of bodywork on your bike, jet-ski, scooter, snowmobile or quad. It's a two-stage acrylic resin adhesive that bonds and solidifies with all sorts of plastic-based bodywork and can fix what ails you, visually and structurally. Easy to apply and ultra convenient, ColorRite's plastic patching goo is 100-percent sandable and paintable.

Mothers Products

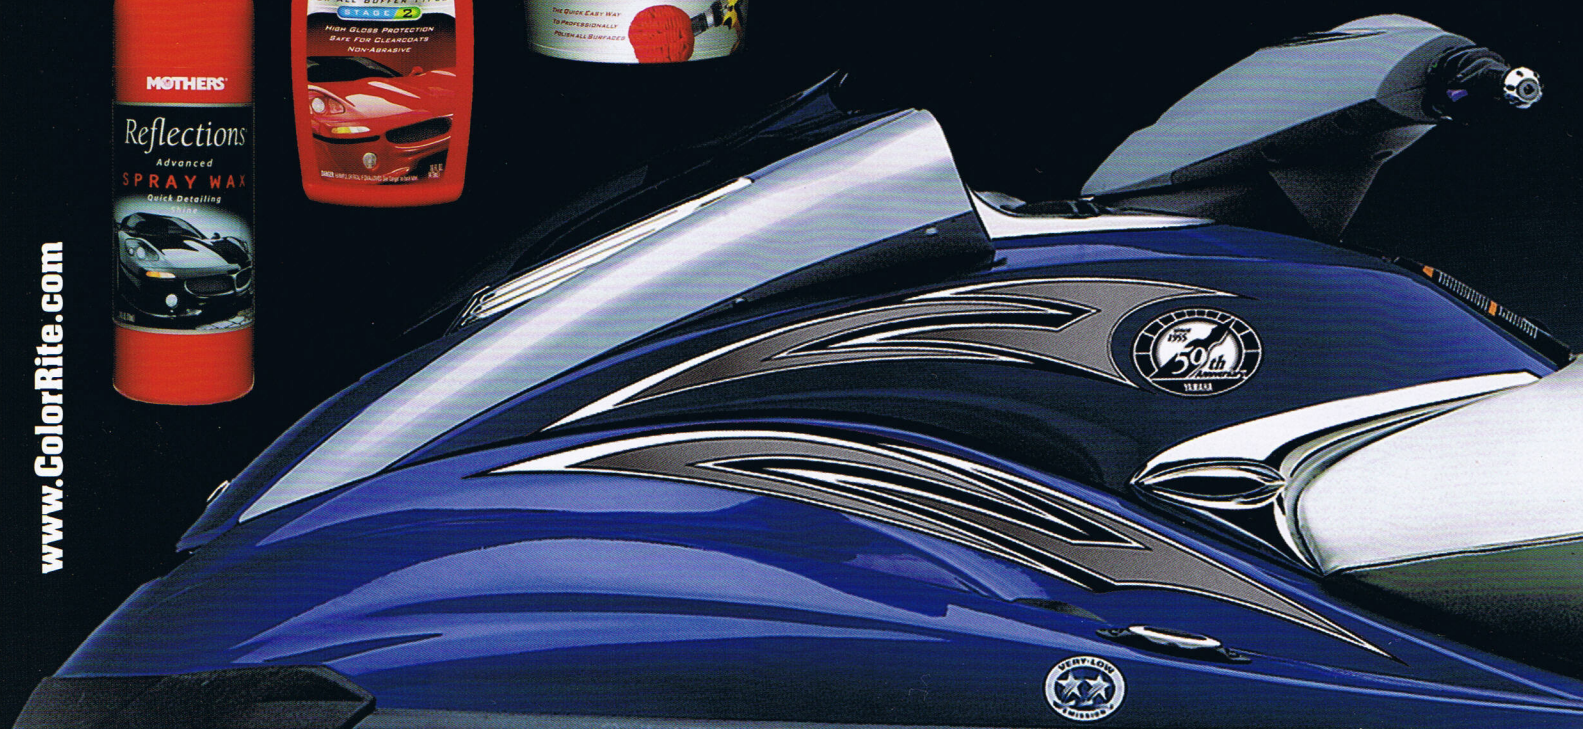

Protect Your New Paint

MOTHERS®

It's a cinch that you employ car-care products which are congruent with the paint you've just lovingly applied. Mothers Polish brews an extensive line of cleaners, coatings, conditioners, polishes and waxes, and ColorRite recommends them for use with their OEM-approved paints. ColorRite tests everything they suggest, so why not stick to the plan? Plan M, that is.
